TCHUKI.COM

Admin Dashboard & Complete Website Management Specification

Admin account	One authorized administrator account: tchukimediahouse@gmail.com
Password	Use the owner-provided initial password through the authentication provider. Never hardcode or publish the plaintext password.
Purpose	Manage the complete public website from one secure dashboard without editing code.

One secure admin account. Complete control. No code changes required for normal content management.

1. Secure Admin Login

- Create a premium Tchuki-branded /admin/login page with email and password fields, show/hide password control, loading state and safe error messages.
- Require authentication before every admin page and admin API operation.
- Use the authentication provider's password hashing and secure sessions. Never store plaintext passwords.
- Allow the administrator to change the password after login and use secure password-reset mechanisms.
- Never put the password in frontend code, public environment variables, Git, database seed files or logs.

2. Dashboard Overview

- Show counts for businesses, services/products, projects, articles, drafts and new inquiries.
- Provide quick actions: Add Business, Add Service, Add Product, Add Project, Add Article and View Inquiries.
- Show recently edited content and recently received inquiries.

3. Business Management

- Add, edit, publish, unpublish, archive and safely delete businesses.
- Manage logo, cover image, description, category, contact details, website, approved social links, brand color and display order.
- Manage each business's services, products, projects, articles and testimonials.
- Preview a business before publishing.
- New businesses must automatically become available to the public site and the interactive Tchuki Ecosystem.

4. Services Management

- Add and edit services under any business.
- Manage name, description, category, image, order and publication status.
- Feature selected services on the homepage.
- Automatically generate service detail pages from database content.

5. Product Management

- Add/edit products, assign them to businesses, upload images and manage descriptions/categories.
- Set optional price/currency and availability only when appropriate.
- Publish, unpublish, feature and archive products.
- Allow visitors to send product inquiries.

6. Project & Portfolio Management

- Add projects with business, title, category, description, cover image, gallery, status and optional external link.
- Publish, unpublish, archive and feature projects.
- Automatically generate polished project detail pages.

7. News & Insights

- Create group-level or business-specific articles and announcements.
- Manage title, slug, excerpt, rich content, cover image, category, publication state and date.
- Support Draft, Preview, Publish and Archive states.
- Feature selected articles on the homepage.

8. Testimonials / Reviews

- Add, edit, approve, publish, unpublish and remove genuine testimonials.
- Manage customer name, role/organization, approved photo/logo, quote and associated business.
- Never fabricate reviews, star ratings or customers.
- Hide the section when no approved testimonials exist, or replace it with a genuine trust/values section.

9. Homepage Control

- Manage hero headline, supporting text, CTA labels and links.
- Choose featured businesses, services, products, projects, articles, testimonials and verified statistics.
- Control section visibility and display order.
- Preview homepage changes before publishing.

10. Media Library

- Upload, preview, replace and safely remove images.
- Organize media by business and content type.
- Validate file type and size and optimize images where possible.
- Restrict media-management actions to the authenticated administrator.

11. Contact & Inquiry Management

- View, search and filter inquiries by business and type.
- Set status: New, In Progress, Resolved or Archived.
- View full inquiry details and optionally record private internal notes.
- Never expose private inquiries publicly.

12. Site Settings

- Manage approved global settings: site name, tagline, logo, favicon, contact phone, contact email, WhatsApp, footer text, social links, SEO defaults and Open Graph image.
- Keep secrets and analytics credentials in secure server-side configuration.

13. Navigation & Footer

- Add, remove and reorder navigation items.
- Choose which businesses appear in navigation.
- Manage footer columns, links and CTA destinations.
- Validate links where possible to reduce broken navigation.

14. Safe Delete & Archive

- Prefer Unpublish or Archive for important business content.
- Require confirmation for permanent deletion.
- Warn before deleting records with dependent content.
- Do not cascade-delete important history without explicit intent.

15. Preview Before Publishing

- Every major content type should support Draft, Preview and Published states.
- Secure preview links must not expose unpublished content to the public.
- Changes made by the admin should flow to the live website through the shared database.

16. Security Requirements

- Use server-side authorization, not only hidden frontend buttons.
- Use Supabase Row Level Security if Supabase is used.
- Validate and sanitize all admin input.
- Rate-limit login and sensitive endpoints where supported.
- Do not log passwords or authentication secrets.
- Protect private inquiries, profiles and unpublished content.
- Use secure session handling and HTTPS in production.

17. Future Expansion

- Adding a new Tchuki company must not require a developer to edit homepage code.
- Adding services, products, projects or articles through the dashboard should automatically update the relevant public pages.
- Future companies should automatically become eligible for the Tchuki Ecosystem section.
- All public content should come from the same database managed by the admin.

18. Final Instruction to Lovable

- Build a complete secure Tchuki.com administration system. The sole initial administrator is tchukimediahouse@gmail.com.
- Configure the owner-provided initial password securely through the authentication provider; do not place the plaintext password in source code, PDFs, client-side variables, database seed data or logs.
- The administrator must be able to add, edit, publish, unpublish, archive and manage businesses, services, products, projects, articles, testimonials, images, homepage sections, navigation, footer content, inquiries and approved settings.
- Every approved database change should be reflected on the live website without requiring code changes.

Security principle: one authorized administrator, secure authentication, server-side authorization, and no exposed credentials.
